

You need to create a staff accounting system

You should use following tools:

- NodeJS
- TypeScript
- NestJS
- MongoDB
- PrismaORM

Your application should implement following functionality:

1. Creating an employee

1.1 employee model should include following properties:

- name
- surname
- salary
- date hired (creation date)
- vacancy

2. Obtaining a list of all employees

3. Updating an employee

4. Deleting an employee

5. Creating a monthly report

6. Obtaining a monthly report

6.1 each monthly report should be stored in database

6.2 monthly report should include following data:

- the amount of money paid for each vacancy
- total amount of money paid
- amount of money paid to each employee

example:

```
1  {
2    vacancies:[
3      {
4        name:"Frontend developer",
5        paid:1300
6      }
7    ];
8    employees:[
9      {
10       id:"0304032023",
11       name:"NAME",
12       surname:"SURNAME",
13       salary:1300,
14       job:"Frontend developer"
15     }
16   ];
17   total:1300
18 }
```
